3	Items are able to be purchased from the store and is ready to be implemented with a payment api	Josh	20+ hrs	Finalize all page functionality	~20-30 hrs	
4	Login functionality tested	Everton	5 hrs			
5						

## Current Design to Date

The most accurate design of the website as of late is modelled off of our mock ups from our design document. The client has specified certain likes/dislikes for each mockup and we are basing our ideas off of that information.

## Current Project Progress

Our group made major headway in the project this week by getting Travis working with phpunit and our webhooks up and running. We still have lots of work to do with breaking down our pages based on the functions in each to ensure that they are being tested properly but this is a major accomplishment and we are all looking forward to moving on from here. After meeting with Angie she seems to be very pleased with how things are going as of right now, she is happy that the store is almost completely operational and is happy with how things are looking so far. We still have lots of ground to cover but the project is seeming less daunting right now. We can say that progress is going well now that are finally able to focus solely on developing tests and our pages.

## Group Member Next Cycle Task Time Estimates

Tasks	Everton	Joshua	Trevor
Write phpunit tests for validation class			2 hrs
Admin page functionality		~10 hrs	~20 hrs
Artist and Venue profile pages and sorting		~7 hrs	~15 hrs
